1. Event Management – B2B and B2C
2. Client Onboarding – Partner Account Relationship
3. Complaint Management System
4. HR System for Employees
5. Query Management – Finance Team Billing Queries
6. University Management System
7. School System Management

1 Event Management – B2B and B2C

AI Prompt:

I want you to create a Salesforce use case for an Event Management system. This system should support both B2B events (for companies, partners and Supplier) and B2C events (for individual customers, may be contractors).

Please explain the business problem, who will use the system, and how Salesforce can be used to manage events, registrations, date of the even, no of attendees, payments, and communication.

Describe the Salesforce objects that would be needed, how automation like Salesforce Flow can help, and what kind of reports and dashboards the business would use.

Also explain the difference between handling B2B events and B2C events in Salesforce, using real-life examples. Don't give me the solution in this document as my focus should be use case only (Companies, problem statement)

2 Client Onboarding – Partner Account Relationship

AI Prompt:

I want a Salesforce use case for a Client Onboarding process where partners are also involved.

<https://gofund.me/11532fb68>

Please explain how a company can use Salesforce to onboard new client's step by step, starting from initial sign-up to full activation.

Describe how Accounts, Contacts, Partner Accounts, and Opportunities would be used, and how partners can see and work on client data.

Explain how Salesforce automation can track onboarding progress, send notifications, and ensure data quality.

Also include what reports managers would use to monitor onboarding success and delays.

3 Complaint Management System

AI Prompt:

Create a Salesforce use case for a Complaint Management system.

Explain how customers can raise complaints through different channels like email, web forms, or phone calls, and how Salesforce can manage these complaints.

Describe the full complaint lifecycle, including assignment, escalation, resolution, and customer communication.

Explain how automation can reduce manual work and how reports can help the business understand complaint trends.

Also mention how this system improves customer satisfaction and service efficiency.

4 HR System for Employees

AI Prompt:

I want a Salesforce use case for an internal HR system used by employees and the HR team.

Explain how Salesforce can store employee information and manage HR processes like onboarding, leave requests, approvals, and employee exits.

Describe how automation can reduce HR manual work and how data security can be maintained for confidential employee data.

Also explain what kind of dashboards HR leaders would use to track employee information and HR performance.

5 Query Management – Finance Team Billing Queries

AI Prompt:

Create a Salesforce use case for managing billing and finance-related queries.

Explain how employees or customers can raise billing questions and how the finance team can track, prioritize, and resolve them using Salesforce.

Describe how automation can help with query assignment, SLA tracking, and escalations.

Explain how sensitive financial data can be secured and what reports finance managers would use to monitor workload and response times.

6 University Management System

AI Prompt:

I want a Salesforce use case for a University Management system.

Explain how Salesforce can be used to manage students, faculty, courses, admissions, and enrolments.

Describe how processes like admissions, attendance tracking, performance monitoring, and communication can be automated.

Also explain how different users (students, teachers, and administrators) will access different data and what reports university leadership would use.

7 School System Management

AI Prompt:

Create a Salesforce use case for a school management system for AchoSchool.
