can you give me salesforce technical design from following information as an image file?

GlobalEdge Consulting Group is a mid-to-large professional services company that runs an annual programme of 200+ business events including executive roundtables, client workshops, certification training, partner summits, and supplier briefings. Their

attendees include senior executives from client companies, technology partners, and independent contractors seeking professional development credits.

Currently, events are coordinated by a team of 12 event managers across three regional offices using a combination of a third-party ticketing platform for public registrations, spreadsheets for attendee tracking, email for communications, and a separate invoicing system for payment collection. This creates significant manual overhead, data inconsistency across tools, and poor visibility for leadership across the business.

company profiles and many similar organisations, a consistent set of business problems has been identified. These problems span operational inefficiency, data fragmentation, poor customer experience, and limited business intelligence.

- Fragmented Tools and Manual Processes
- Inability to Distinguish and Serve B2B vs B2C Audiences
- Poor Visibility of Event Performance and ROI
- Weak Pre- and Post-Event Communication
- Payment and Invoicing Complexity
- Compliance and Data Privacy Risk

User Personas — Who Will Use the System

Event Manager

Sales / Account Manager

Marketing Manager

Finance / Billing Team Partner / Supplier Manager System Administrator External

Registrant (B2C) External Delegate (B2B)

Prompt:

I recently finished my Admin training and am now working on an implementation project to prove my skills to hiring managers during future interviews. I have attached the full use case document to this project folder in the cloud, but I've also included a snippet above for quick reference.

Based on my current knowledge, I want to create a solution design document for a sample company called 'GlobalEdge Consulting Group.' Please use a Standard Objects approach; I would like to avoid using too many custom objects. My focus is on using Leads, Opportunities, Accounts, Person Accounts, and Contacts. Couple of automation email alerts using flow.

Since I will be implementing this in a free Salesforce Developer Org, which is limited to two users, please design the solution for two personas. We can use the System Administrator as one of the active actors.

Output may be similar to this

salesforce

Salesforce Solution Design for GlobalEdge Consulting Group

Key Personas

System Administrator

- Manages & Configures System

Event Manager

- Plans & Manages Events

Core Standard Objects
